

The National Park System preserves the nation's most significant natural and cultural resources. The system includes nearly 400 sites throughout the United States and its territories. Protected within the system are large natural areas, significant cultural resources, important historic sites, outstanding views, and more.

The Sabbatical in the Parks Program invites in-spring faculty sabbaticals to conduct research and other scholarly activity which provides valuable knowledge for the National Park Service and/or advances science and human understanding.

The Program Works by providing faculty members and park staff with the services of a dedicated administrator through which all arrangements are made.

Eligible Faculty are from four-year institutions of higher education in the United States who have successfully completed two sabbaticals according to the procedures of their institution.

No Deadline for application submission, but faculty should submit materials as soon as possible before their planned sabbatical.
